### How does this affect me?

Today's web user expects a fast and seamless website experience. Delivering that fast experience can result in increased visits, conversions and overall happiness.

As if you didn't need more incentive, **Google has announced that they are using page speed in their ranking algorithm.**

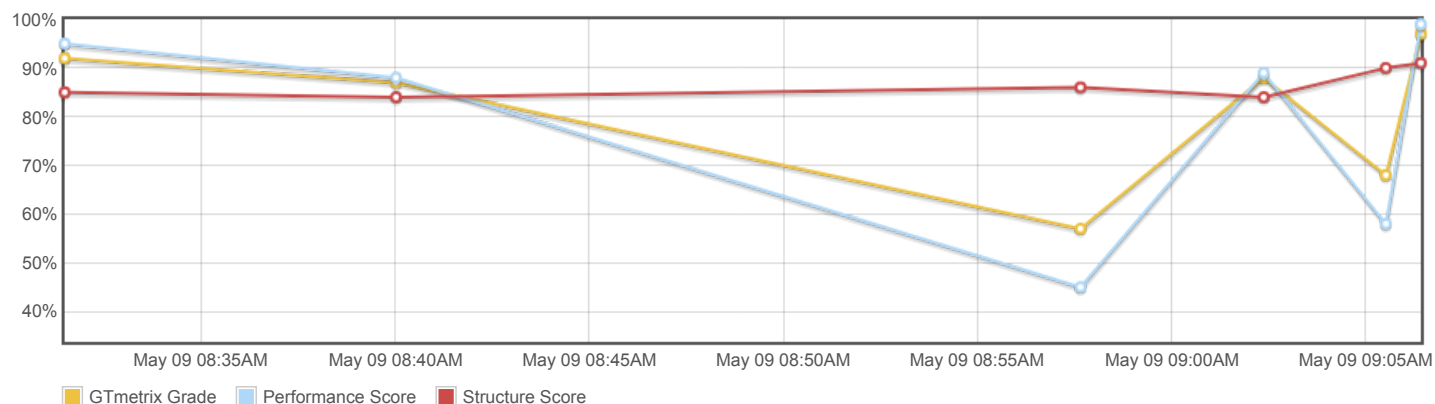

### About GTmetrix

**CARBON60**  
THE MANAGED CLOUD COMPANY

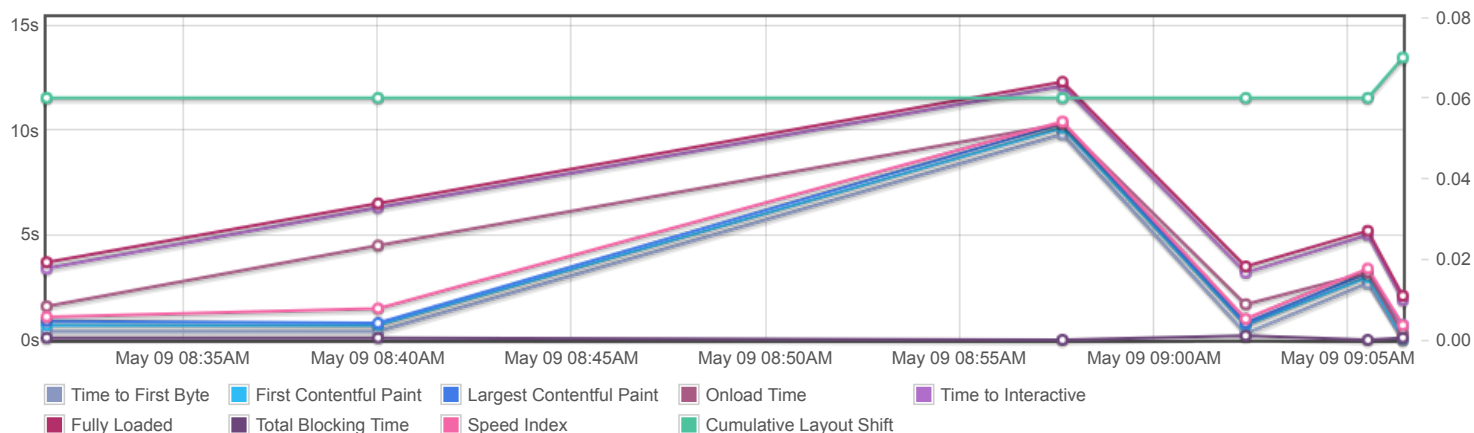

GTmetrix is developed by the good folks at **Carbon60**, a Canadian hosting company with over 26 years experience in web technology.

## Performance Metrics

|                                                                                                                                                                                 |                                           |                                                                                                                                              |                                          |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------|
| <b>First Contentful Paint</b><br>How quickly content like text or images are painted onto your page. A good user experience is 0.9s or less.                                    | Good - Nothing to do here<br><b>144ms</b> | <b>Time to Interactive</b><br>How long it takes for your page to become fully interactive. A good user experience is 2.5s or less.           | Good - Nothing to do here<br><b>1.9s</b> |
| <b>Speed Index</b><br>How quickly the contents of your page are visibly populated. A good user experience is 1.3s or less.                                                      | Good - Nothing to do here<br><b>673ms</b> | <b>Total Blocking Time</b><br>How much time is blocked by scripts during your page loading process. A good user experience is 150ms or less. | Good - Nothing to do here<br><b>60ms</b> |
| <b>Largest Contentful Paint</b><br>How long it takes for the largest element of content (e.g. a hero image) to be painted on your page. A good user experience is 1.2s or less. | Good - Nothing to do here<br><b>682ms</b> | <b>Cumulative Layout Shift</b><br>How much your page's layout shifts as it loads. A good user experience is a score of 0.1 or less.          | Good - Nothing to do here<br><b>0.07</b> |

## Browser Timings

|            |       |             |       |              |       |
|------------|-------|-------------|-------|--------------|-------|
| Redirect   | 0ms   | Connect     | 27ms  | Backend      | 4ms   |
| TTFB       | 31ms  | First Paint | 144ms | DOM Int.     | 180ms |
| DOM Loaded | 198ms | Onload      | 263ms | Fully Loaded | 2.1s  |

| IMPACT  | AUDIT                                              |                                                   |
|---------|----------------------------------------------------|---------------------------------------------------|
| Med     | Don't lazy load Largest Contentful Paint image     | LCP was lazy loaded                               |
| Med-Low | Serve static assets with an efficient cache policy | Potential savings of 111KB                        |
| Low     | Use a Content Delivery Network (CDN)               | 1 resource found                                  |
| Low     | Avoid an excessive DOM size                        | 694 elements                                      |
| Low     | Eliminate render-blocking resources                | Potential savings of 12ms                         |
| Low     | Avoid long main-thread tasks                       | 3 long tasks found                                |
| Low     | Avoid large layout shifts                          | 5 elements found                                  |
| Low     | Reduce unused JavaScript                           | Potential savings of 189KB                        |
| Low     | Avoid enormous network payloads                    | Total size was 0.96MB                             |
| Low     | Properly size images                               | Potential savings of 22.9KB                       |
| Low     | Reduce JavaScript execution time                   | 327ms spent executing JavaScript                  |
| Low     | Reduce unused CSS                                  | Potential savings of 60.3KB                       |
| Low     | Avoid serving legacy JavaScript to modern browsers | Potential savings of 30.3KB                       |
| Low     | Avoid non-composited animations                    | 6 animated elements found                         |
| Low     | Avoid chaining critical requests                   | 2 chains found                                    |
| N/A     | Largest Contentful Paint element                   | 1 element found                                   |
| N/A     | Reduce initial server response time                | Root document took 4ms                            |
| N/A     | Minimize main-thread work                          | Main-thread busy for 1.0s                         |
| N/A     | Reduce the impact of third-party code              | Third-party code blocked the main thread for 17ms |
| N/A     | User Timing marks and measures                     |                                                   |
