

How to break view jail fast

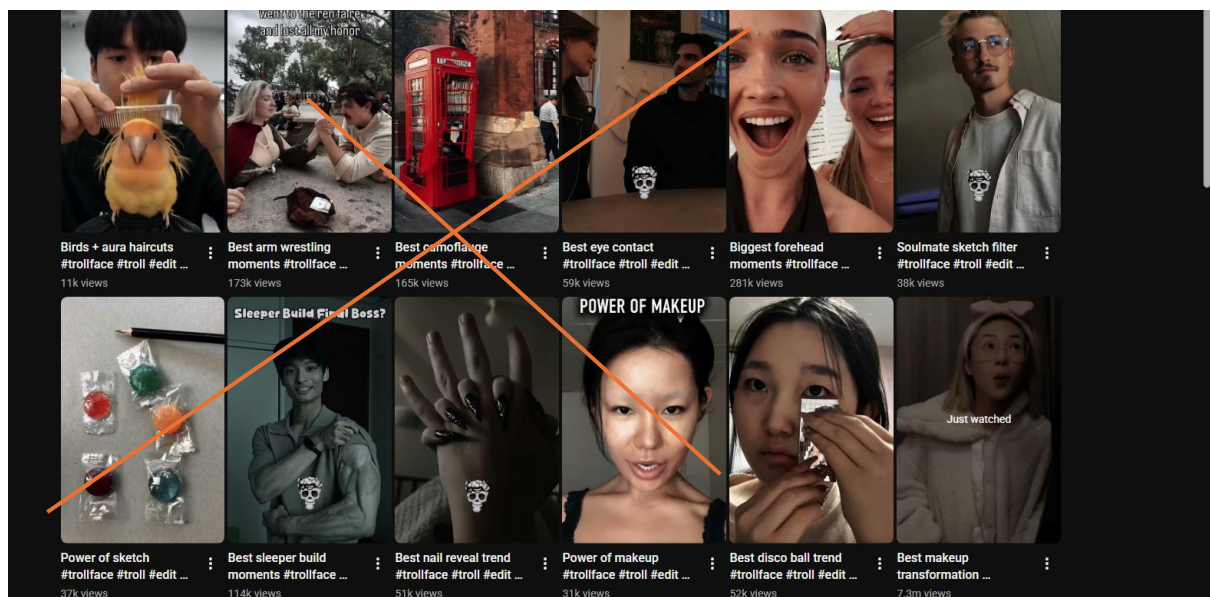

1] Vvsa doesn't matter that much

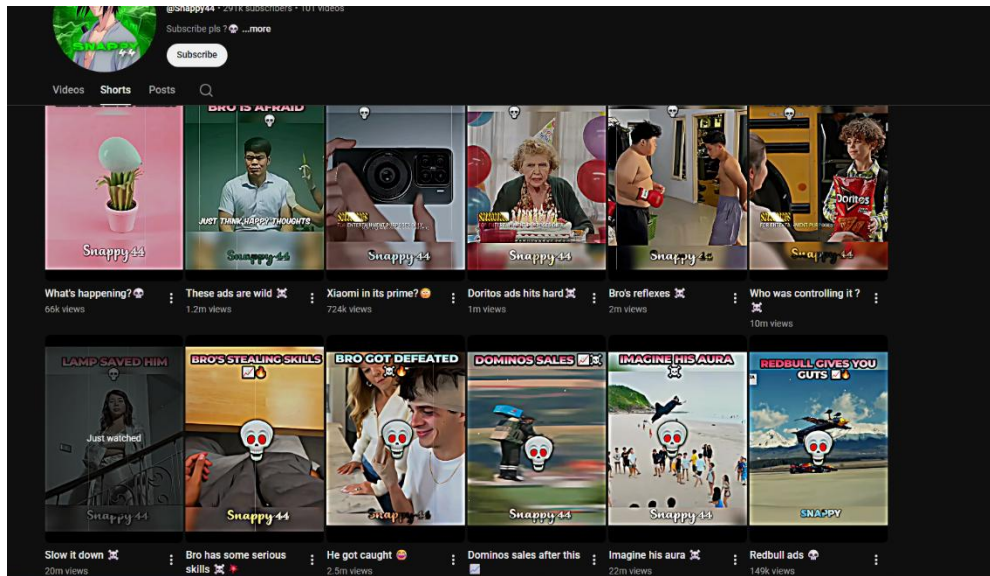

2] Target 68 above, all my viral shorts is 70 plus vvsa not 80

First music method.

Go to your search type trollface edit sort by popular and month. See the ones which have millions of views on multiple videos not just one

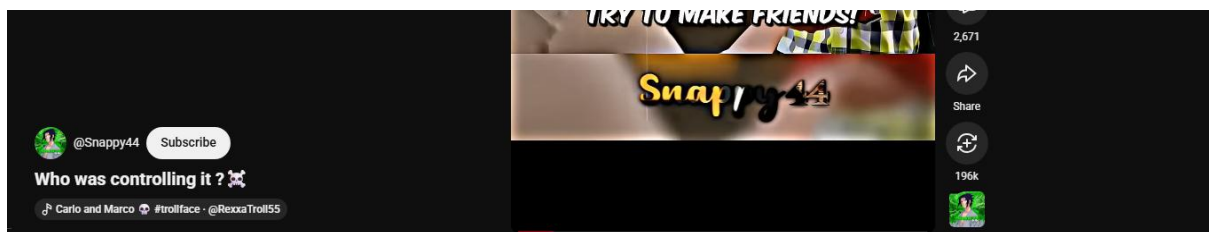

See the views its bad not consistent

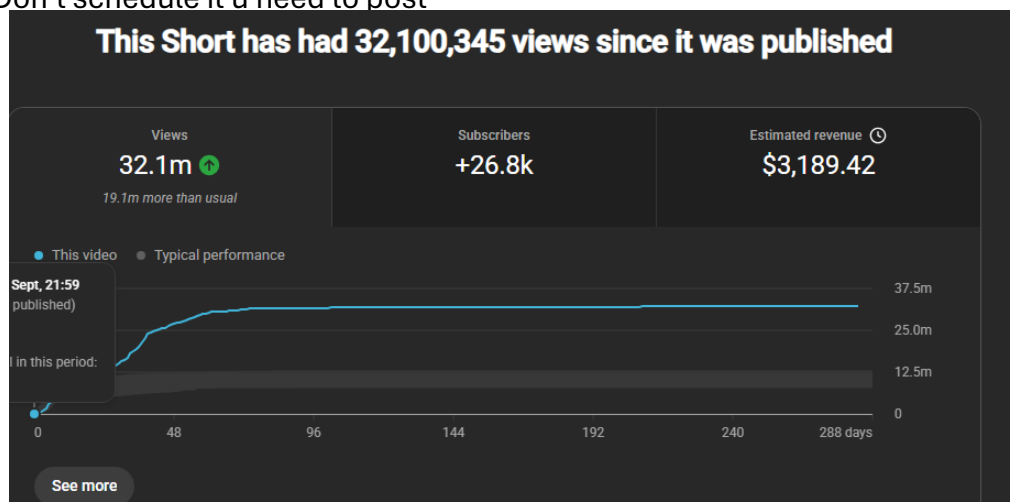

This is good.

Now click one of their vids.

Use the same song they're using, but when you select the song, set the volume to zero. That way, it gets pushed with that song on the feed while still using your own video.

3] Always post at 9.59pm Malaysian time on the dot or 10.31pm on a dot don't miss this time. Don't schedule it u need to post

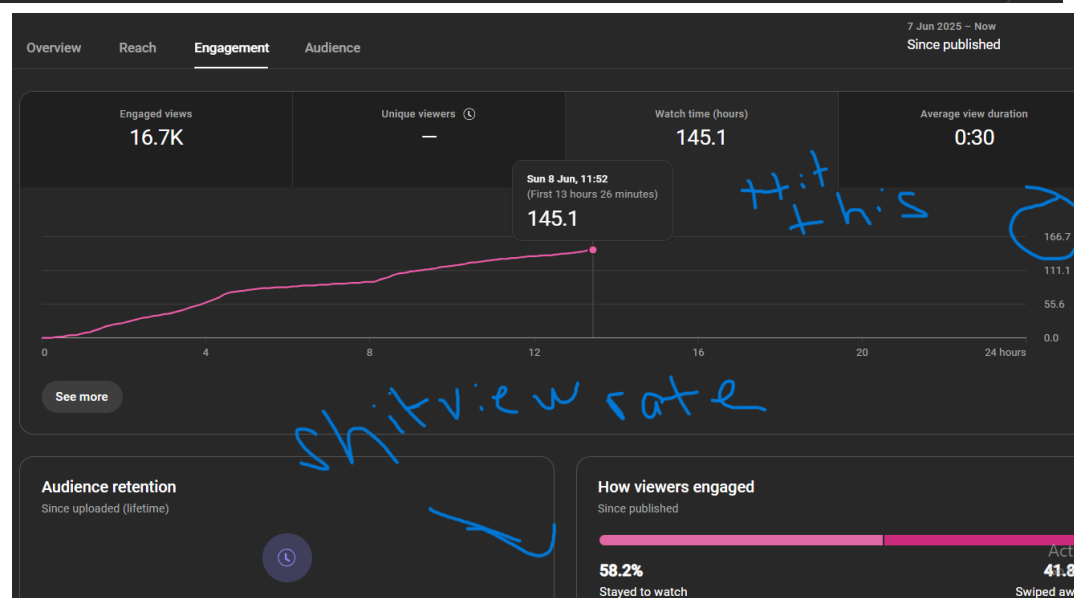

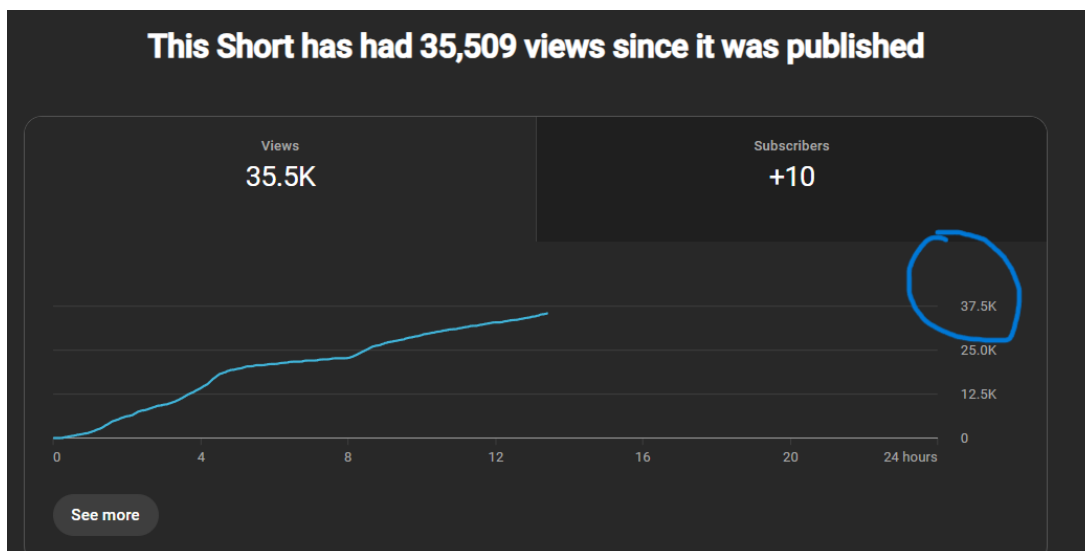

4] Hashtag

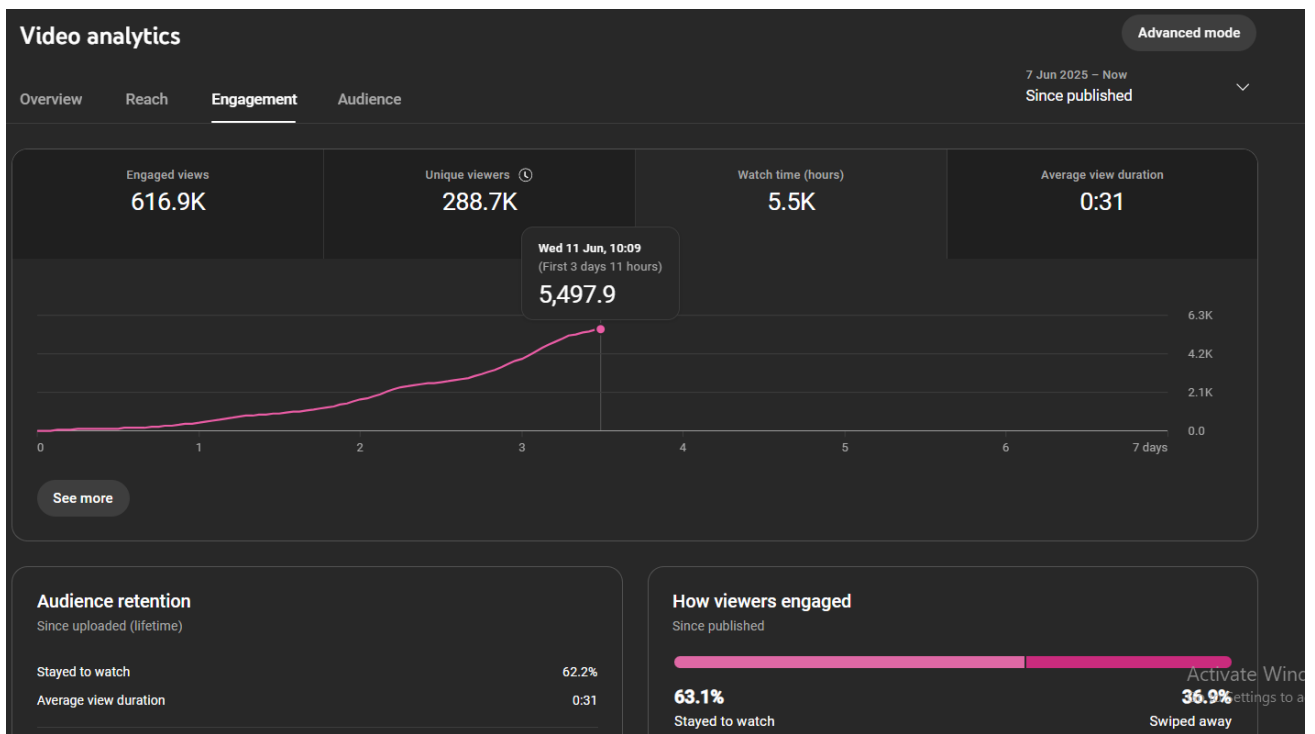

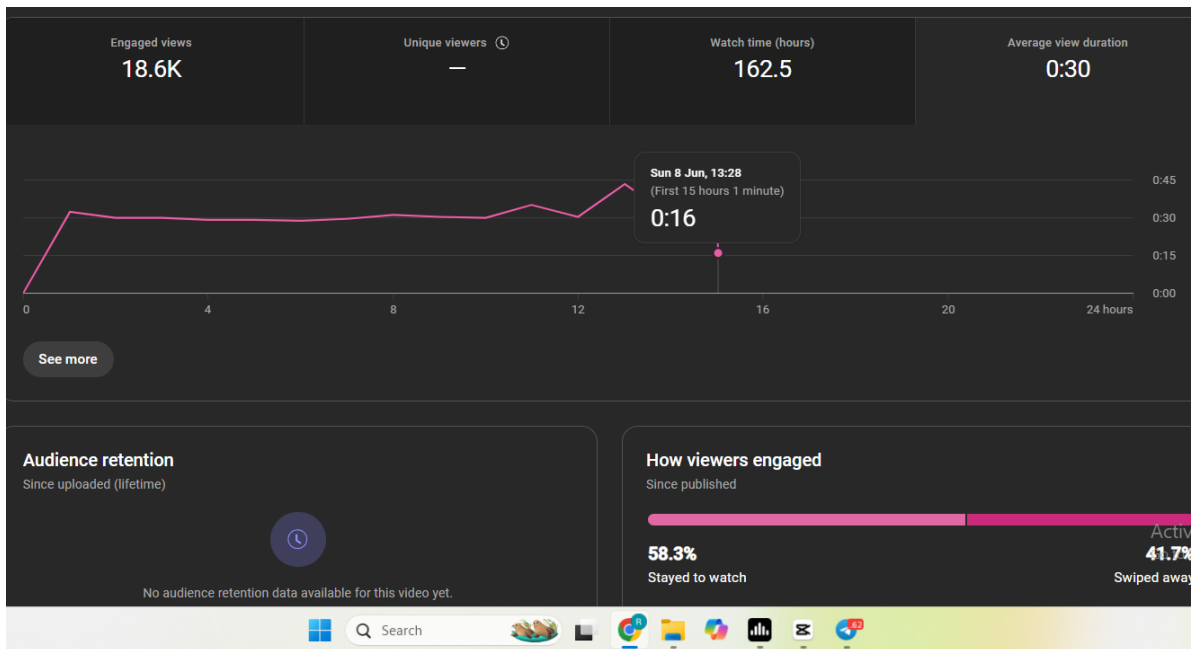

Use 4 hashtags in the title and 6 hashtags in the description. Start with #shorts #fyp #trending. The other 3 hashtags should relate to your video. For example, if your video has a bear inside, use #bear. Then check your competitors with millions of views and copy two of their hashtags.

5] The video

YouTube gives you an estimated or predicted number of views it might reach. For example, my Short was predicted to hit 37K views. If you go to the Watch Hours tab, it also shows a predicted watch hour target in my case, 166 hours. What I noticed is that before your video hits the predicted views, it needs to hit that watch hour target first.

My video had a 16-second AVD out of 31 seconds, and the view rate was terrible. But because it kept consistently hitting the watch hour benchmark, the video still reached 600K views and is still growing which made AVD and view rate kind of irrelevant

When you're starting, make videos that end at 31 seconds, nothing more.

Good luck going viral.
